

Water Soluble Non Woven Bag Report

Water soluble non-woven bag is PVA material, made of PVA fiber, white, odorless, it can be stored for a long time under normal temperature conditions, at least 2-3 years will not be deformed, can be used normally. It has the property that it can be completely dissolved in hot water, thus achieving the effect of environmental protection.

PVA water soluble non-woven bag in water after the generation of water and carbon dioxide, without any other harmful substances, will not pollute the environment, dissolved water composition only PVA, is harmless to soil, plants, animals. It is a new type of environmental protection products.

Water soluble non woven bag is more convenient than the biodegradable non woven bag, usually the biodegradable non woven bag after throwing away at least 6 months to complete degradation, and water soluble non woven bag only need to be put into hot water and accelerated stirring for dissolution, dissolution time only takes 3-5 minutes.
